

Teachers, Students, and Lost Communication

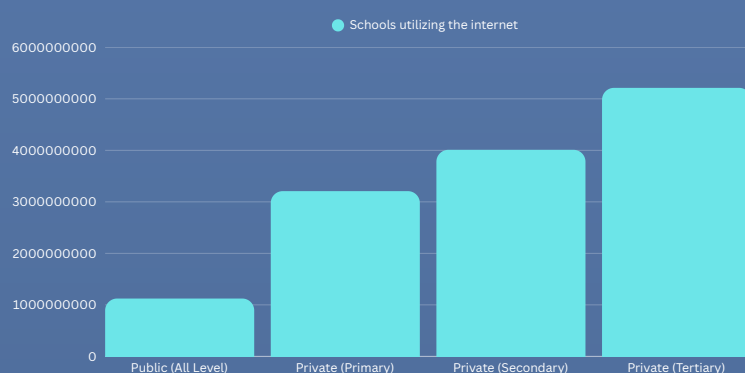

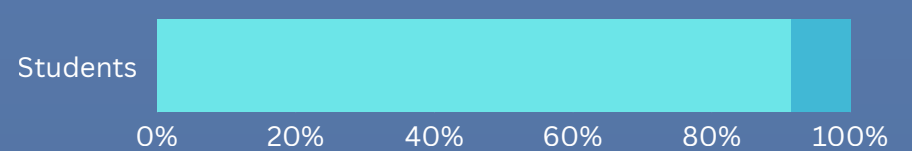

Information circulation through digital means improved information exchange, student independency, and motivation.

• Timotheou et al., 2022

91.5% of students expected more utilization of digital technologies in universities.

• Keane et al., 2022

Communicates through Digital Technologies
Does not communicate through Digital Techn...

In 2022, 66% of the world could use the internet but only less than that utilized it in education.

• GEM Report, 2023

The studies of Timotheou and GEM Report that not only do students and teachers in school rely on digital communication, but also that in doing so, Students effectively learn and communicate more than they normally do in non-online contexts.

What can we do?

By utilizing the following digital means:

Real-Time Messaging

Notifications of
school/class reminders

Group chats

... Communication now happens faster without significant burden on staffs and students.
